Lab 2 Neuroanatomy

- These sections are in a _____________ plan
- Set all four sections so that the anterior part of the brain is on the top of the page
- Organize the sections in sequence, from the most ventral to the most dorsal one

BEFORE PROCEEDING, ASK YOUR INSTRUCTOR FOR FEEDBACK

Next, identify the following structures in all the sections they appear:
  - Corpus Callosum
  - Lateral Ventricles
  - Lateral Fissure

In the most ventral section, circle the following structures
  - Frontal Lobe
  - Temporal Lobe
  - Occipital Lobe
  
  - Anterior Commissure
  - Posterior Commissure
  - Superior Colliculus

The scans of this patient depict a stroke in the surface of one of her lobes, can you find it? (circle it)

By neurological convention, scans in the horizontal plane are displayed from below (as if the doctor were looking toward the head of the patient with the patient in bed and the doctor is at the patient’s bedside next to the feet). With this in mind, name the side of the stroke and the lobe.
